Use-Case Specification: Logout Account

1. Logout Account

1.1 Brief Description

Users who have already logged in their account can log out to access a new account or prevent their account from being seen by others.

2. Flow of Events

1. The user goes to the account settings tab.
2. The user presses on the logout button.
3. The system shows a message with yes/no buttons to reassure that the user wants to log out.
4. There are 2 scenarios:
 - If the user chooses yes: the system will redirect the user to the login page.
 - If the user chooses no: the user will maintain their status at the account settings tab.

3. Special Requirements

3.1 Performance

The logout process should complete within 2 seconds under normal circumstances.

3.2 Usability

The logout button should be easy to notice and well-organized on the account settings tab.

3.3 Security

The system should ensure that there is no sensitive data left accessible after logging out.

4. Preconditions

4.1 Internet access

The user must connect to the internet.

4.2 Logged-in account

The user must log in their account.

4.3 Account settings access

The user must access the account settings tab.

5. Postconditions

5.1 After Logout

- The system will redirect the user to the login page.
- The system will keep all the sensitive data of the account from being leaked.
