Use-Case Specification: Ban Users

1. Ban Users

1.1 Brief Description

This use case describes how the admin can ban users that violated the rules.

2. Flow of Events

2.1 Basic Flow

1. The admin opens the User management page.
2. The admin searches for the user that violated the rules and should be banned by entering their username/user id in the search bar.
3. The admin chooses the user to be banned from the searching results.
4. The admin clicks the “Ban” button.
5. The admin enters the reason for banning.
6. The admin clicks the “Confirm” button, the system then bans the user.
7. The system notifies the user of the reason for banning them.

The admin can choose to continue banning users or leave.

2.2 Alternative Flows

2.2.1 Exception 1: Username/User id not found

3b. The searching results are empty because the username/user id doesn't exist.
The admin can choose to look for other users to ban or leave.

2.2.2 Exception 2: Server failure

6c. The system fails to ban the user, it then displays the error message on the screen for the admin.
The use case terminates.

3. Special Requirements

3.1 Performance

The time it takes for every step in the use case should not exceed 0.5s, assuming the internet connection is stable.

3.2 Security

A token is required to perform this use case. The token expires in 1 hour.

3.3 Moral standards

The admin should not abuse their rights to ban innocent users as they please.

4. Trigger

The admin finds users that violated the rules.

<document identifier>	

5. Preconditions

5.1 The admin's device is connected to the internet

5.2 The admin is logged in

6. Postconditions

6.1 Banned user

Users that violated the rules are banned. They are notified of the reason for being banned.
