Use-Case Specification: Unban Users

1. Unban Users

1.1 Brief Description

This use case describes how the admin can unban users.

2. Flow of Events

2.1 Basic Flow

1. The admin opens the User management page.
2. The admin searches for the user that got banned before by entering their username/user id in the search bar.
3. The admin chooses the user from the searching results.
4. The admin clicks the “Unban” button.
5. The admin clicks the “Confirm” button, the system then unbans the user.
6. The system notifies the user of their unbanning.

2.2 Alternative Flows

2.2.1 *Exception 1: Username/User id not found*

3b. The searching results are empty because the username/user id doesn't exist.
The admin can choose to look for other users to ban or leave.

2.2.2 *Exception 2: Server failure*

6c. The system fails to unban the user, it then displays the error message on the screen for the admin.
The use case terminates.

3. Special Requirements

3.1 Performance

The time it takes for every step in the use case should not exceed 0.5s, assuming the internet connection is stable.

3.2 Security

A token is required to perform this use case. The token expires in 1 hour.

4. Trigger

The admin wants to unban a user after reconsidering their reason for being banned.

5. Preconditions

5.1 The admin's device is connected to the internet

5.2 The admin is logged in
