VIETNAM NATIONAL UNIVERSITY, HO CHI MINH CITY
UNIVERSITY OF SCIENCE

Project proposal

22CLC05 - Group 01

Introduction

We want to build a website that allows people to read mangas online.

Our website will be 100% free with no paid feature, no ad revenue.

Target users and environment

The target users will be anyone that likes to read mangas but doesn't have spare money to buy physical manga books or the digital version.

Key features

The website will have 4 types of users

User type	Functionalities
Every user (not logged in)	Can read mangas. Can search for mangas by title, or by filtering. Can report inappropriate contents (a manga or chapter).
Logged in user	Can additionally add mangas to their library. A library will have a reading tab, completed tab and re-reading tab. Can blacklist categories/authors. Get notified when their reading mangas get updated. Can continue to read a manga from the chapter/page that they left off.
Approved user	Can upload mangas, authors. Can update their mangas' information, chapters. Can delete their mangas. Many users can upload the same manga. Each manga will have an uploader linked to them.
Admin	Approve users that can upload mangas. Only admin can upload new/update/delete categories. Have a different interface to check for user reports. Ban/delete users with inappropriate contents. Delete mangas with inappropriate content. Delete authors.

The website will also display recent updated mangas on the home page.
