Use-Case Specification: Request Approval

1.   Request Approval

1.1   Brief Description

This use case describes how a user can request for admin's approval to become an approved user.

2.   Flow of Events

2.1   Basic Flow

1.   The user goes to their profile page by clicking on their avatar on the navigation bar.
2.   The user clicks on the "Request approval" button next to their role display.
3.   A form appears on the screen, the user enters their reason.
4.   The user clicks the "Make request" button on the form.
5.   The system sends the form to the admins and the user now waits for the result.

2.2   Alternative Flows

2.2.1   Alternate 1: The user cancels the form

4b. The user clicks the "Cancel" button.

The use case terminates.

2.2.2   Exception 1: Server failure

5c. The system fails to send the form to the admins. It then displays the error message on the screen.

The use case terminates.

3.   Special Requirements

3.1   Security

A token is required to perform this use case. This token expires in 1 hour.

3.2   Performance

Each step in the use must not take more than 0.5s to complete.

4.   Preconditions

4.1   The user's device is connected to the Internet

4.2   The user is logged in

5.   Postconditions

5.1   New approval request

A new approval request is created and stored in the database, waiting for the admins to process.
